Science and Engineering Research Program's 2019 Project Proposal

institute: Thermochemistry

project title: Exp. characterization of a 'black body' radiation device.

project description: The Institute has some research on radiation properties (emissivity). For calibration a 'black body' device is needed. This new device has to be calibrated itself as well.

required skills: basic thermodynamics, heat transfer basics

contact/supervisor: E. Lang, S. Kabelac

Please return to Kristina Schmidt or Uta Knoche till 31th of October.
